---

What was the final decision on the turnaround time? Are we still going with the 3 day?

**Subject:** RE: Hope iron & Metal - Updated Sampling Map

Can you make the map similar to the last one where it shows color coded exceedances, eliminating the Historical reference. Use the same legend and same type of map Figure 2-2 with same descriptors in legend.

I do not want to resample in grids that have been sampled at specific depths.

I want to collect surface and subsurface samples at 0-6, 6-18, 18-24 in areas where samples have not been collected

In the areas where we have elevated Pb or PCB's down to 18 inches from our current ESI and SA data, lets pull 24-48 inch subsurface samples and analyze both. (I think that is roughly 12 grids?)

On the lab turnaround, what are the differences in cost? I understand the validation.

Also, it might be worthwhile to bring an XRF to screen as we see fit.

**Subject:** Hope iron & Metal - Updated Sampling Map

Historical exceedance map has been updated with the additional sampling points from the ADEQ report (see attached). Let me know if there's anything you'd like changed/added. I submitted the QASP for review last week after our meeting. I'll forward that to you once the review process is completed.
